Notice

This document describes the locations, capacities and contents of volatile and non-volatile memory devices within the FreeFlow[®] Print Server.

The context of the information in this document is that normal means of access or data extraction are being attempted in order to reproduce, read, or extract stored or latent data. This does not include attempts to reproduce, read or extract data or reverse engineer storage methods by individuals or organizations with advanced skills or through the use of extraordinary resources and measures or specialty equipment not normally available in the industry or to the public.

The content of this document is provided for information purposes only. Performance of the products referenced herein is exclusively subject to the applicable Xerox Corporation terms and conditions of sale and/or lease. Nothing stated in this document constitutes the establishment of any additional agreement or binding obligations between Xerox Corporation and any third party.

Statement of Volatility

Xerox DocuColor 8080 Digital Press FreeFlow[®] Print Server

Introduction

The Xerox DocuColor 8080 Digital Press FreeFlow[®] Print Server is used to perform the following tasks:

- High Speed Production Printing

The FreeFlow[®] Print Server is intended to be connected to:

- Xerox Print Engine

- Xerox Print Station Interface Platform (“PC-UI”) – optional product-specific feature

These modules provide the basic configuration. Depending on what is purchased, the number and types of feeders and finishers contained in the completed system can change.

This document describes the amounts and types of memory contained in the device in an easy to read tabular format. To allow security issues to be addressed as needed, specific commentary has been included about job data and where Personally Identifiable Information (PII) can be found in the system.

The information contained in this document has been verified at the time the product is released for sale. Manufacturing process changes may require that memory amounts are increased, but the purpose or contents of the memory should not change.

General Memory Information

Volatile Memory

All volatile memory listed is cleared after power is removed (decay occurs generally within 20 seconds at room temperature).

All volatile memory listed is required for normal system operation and during service and diagnostic procedures.

Removal of any volatile memory will void the warranty.

Non-Volatile Memory

All non-volatile memory listed is required for normal system operation and during service and diagnostic procedures.

Removal of any non-volatile memory will void the warranty.

None of the non-volatile memory in the system can be accessed by accidental keystrokes.

Xerox FreeFlow® Print Server (Digital Front End) System Descriptions

The data tables below detail the information regarding the volatile and non-volatile memory contained in the FreeFlow Print Server used on the Xerox DocuColor 8080 Digital Press, Product Code N R A.

The Free Flow Print Server Digital Front End is a PC-type motherboard. It is equipped with a BIOS, main RAM and Video memory. A separate board implements the interface between the print server and the print engine and it contains programmable logic configuration memory.

Volatile Memory Descriptions				
Type (SRAM, DRAM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
DDR2 DRAM	4GB	N	System OS RAM to contain executable code. No job data stored here persistently.	Reboot or power down system.
DRAM	8MB	N	Video Display Controller (Frame Buffer) memory No job data stored here persistently.	Reboot or power down system
DRAM	2MB	N	CPU cache	Reboot or power down system

Non-Volatile Memory Descriptions				
Type (Flash, EEPROM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
Flash EEPROM	4MB	Y with vendor-provided tool.	System BIOS. Boot code. System configuration information. No job data stored here.	Not possible, system not functional if corrupted/removed.
Battery backed (CMOS) RAM	32KB	N	BIOS settings No job data stored here.	Motherboard jumper, OR Remove power, remove battery, wait, then replace.

Image Processing Card:

Volatile Memory Descriptions				
Type (SRAM, DRAM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
DRAM	512MB	N	Software/Firmware download, image data. No job data stored here persistently.	Power down system

Non-Volatile Memory Descriptions				
Type (Flash, EEPROM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
EEPROM	2KB	N	Configuration parameters for image processing software. No job data stored here persistently.	Not possible, system not functional if corrupted/removed.

Interface Card:

Volatile Memory Descriptions				
Type (SRAM, DRAM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
SRAM	1.8432MB	N	Customer image data. No job data stored here persistently.	Power down system

Non-Volatile Memory Descriptions				
Type (Flash, EEPROM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
EEPROM	4KB	N	Programmable logic configuration information. No job data stored here persistently.	Not possible, system not functional if corrupted/removed.

Xerox FreeFlow[®] Print Server (Digital Front End) System Descriptions (continued)

The data tables below detail the information regarding the storage devices contained in the FreeFlow[®] Print Server.

Hard Disk Descriptions					
Complete this table if the device has media storage capability					
Drive / Partition (System, Image):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
System Disk	Y	300GB	N with normal operation	Operating System, Fonts, configuration file storage	Diagnostic Procedure
Image Disk	Y	300GB	N with normal operation	Job Images	Diagnostic Procedure
<p>Additional Information:</p> <p>The System Disk contains the Solaris Operating System and stores executables, fonts, and settings files. During normal operation, files containing customer job data remain stored on the disk until they are eventually over-written in the course of normal processing, or until the Data Overwrite feature is used to “clear or purge” the files.</p> <p>The Image Disk stores images in a proprietary encoded format in non-contiguous blocks. Customer job data and image data may be completely removed by the Data Overwrite Feature. When the system must be returned to Xerox, the entire HDD can be cleaned or purged by a bootable diagnostic HDD Purge tool that is available to Xerox Service. These disks are cleared using a four-pass algorithm which conforms to U.S. Department of Defense Directive 5200.28-M (DOD Directive 8500.1 supersedes 5200.28M).</p> <p>NOTE: For even greater security, Xerox provides a “Removable Hard Drive” (RHD) option so that disk drives may be removed from the system and physically secured elsewhere. Xerox Service can also remove the HDDs from the system and hand them over to the customer, for a nominal charge.</p>					

Media and Storage Descriptions					
Type (disk drives, tape drives, CF/SD/XD memory cards, etc.):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
DVD/CD Drive	Y	4.7GB	Yes File storage	Backup Device	Destroy media Overwrite RW media
<p>Additional Information:</p> <p>Print Jobs can be stored on removable media which can be used to back up or store desired jobs. Once copied to media, that information must be physically secured by the user to prevent data loss.</p>					

USB Port(s)	
Complete an entry for each USB port	
USB port and location	Purpose
Front of FreeFlow [®] Print Server: Two USB ports	Operator may store saved jobs or scanned images (if supported by product) on USB storage device. Physical security of this information is the responsibility of the user or operator. NOTE: These USB ports are not being used for diagnostics.
Back of FreeFlow [®] Print Server: Four USB ports	Operator may store saved jobs or scanned images (if supported by product) on USB storage device. Physical security of this information is the responsibility of the user or operator. NOTE: These USB ports are not being used for diagnostics.
<p>Additional Information:</p> <p>A number of devices can be connected to USB ports on the FreeFlow Print Server system. Once information has been copied (either as a back-up data set or as a transfer medium), physical security of this information is the responsibility of the user or operator.</p>
