# Statement of Volatility

## Phaser 6700

### Notice

This document describes the locations, capacities and contents of volatile and non-volatile memory devices within the Phaser 6700.

The context of the information in this document is that normal means of access or data extraction are being attempted in order to reproduce, read, or extract stored or latent data. This does not include attempts to reproduce, read or extract data or reverse engineer storage methods by individuals or organizations with advanced skills or through the use of extraordinary resources and measures or specialty equipment not normally available in the industry or to the public.

The content of this document is provided for information purposes only. Performance of the products referenced herein is exclusively subject to the applicable Xerox Corporation terms and conditions of sale and/or lease. Nothing stated in this document constitutes the establishment of any additional agreement or binding obligations between Xerox Corporation and any third party.

# Statement of Volatility

## Phaser 6700

### Introduction

The Phaser 6700 is used to perform the following tasks:

Printing

This document describes the amounts and types of memory contained in the device in an easy to read tabular format. To allow security issues to be addressed as needed, specific commentary has been included about job data and where Personally Identifiable Information (PII) can be found in the system.

The information contained in this document has been verified at the time the product is released for sale. Manufacturing process changes may require that memory amounts are increased but, the purpose or contents of the memory should not change.

### General Memory Information

#### Volatile Memory

All volatile memory listed is cleared after power is removed (decay occurs generally within 20 seconds at room temperature).

All volatile memory listed is required for normal system operation and during service and diagnostic procedures.

Removal of any volatile memory will void the warranty.

#### Non-Volatile Memory

All non-volatile memory listed is required for normal system operation and during service and diagnostic procedures.

None of the non-volatile memory in the system can be accessed by accidental keystrokes.

## Device Module Descriptions

### Signature Block

This evaluation and summary was completed by:

Signature	
Printed Name	Shell Haff
Job Title	Product Marketing Manager
Job Function	A4 Systems Marketing Manager
Preparation Date	Rev 1.1: October, 25, 2011

This evaluation and summary was completed by:

Signature	
Printed Name	Larry Kovnat
Job Title	Manager of Product Security
Job Function	Product Security Manager
Preparation Date	Rev 1.1: October, 25, 2011

The data tables below detail the information regarding the volatile and non-volatile memory contained in the Phaser 6700 print engine.

Volatile Memory Description				
Type (SRAM, DRAM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
DDR2 SDRAM – System Memory	2GB	N	Executable code, Printer control data temporary storage of job data	Power Off System
<b>Additional Information:</b> All memory listed above contains code for execution and configuration information. User or job data is temporarily stored in this location.				

Non-Volatile Memory Description				
Type (Flash, EEPROM, etc)	Size	User Modifiable (Y/N)	Function or Use	Process to Clear:
Serial EEPROM	32KB	via Diagnostics	Control setpoints, Configuration settings	Diagnostic
<b>Additional Information:</b> The EEPROM is required for normal operation. The EEPROM is removable.  All memory listed above contains code for execution and configuration information.  The NVM contains devices configuration settings. No job files are stored on these devices.				

Media and Storage Descriptions					
Type (disk drives, tape drives, CF/SD/XD memory cards, etc.):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
SD Card	Yes	4GB	Yes	Firmware, configuration settings	Diagnostic
<p><b>Additional Information:</b>            The SD Card is required for normal operation.</p> <p>The SD Card contains the Linux Operating System and stores executables, fonts, and settings. We cannot erase the flash memory</p> <p>The Job Images like Saved Jobs, Secure Jobs and Personal prints are not supported when Hard disk is not available in Phaser 6700. When HDD is present these options are enabled and we can schedule ODIO to erase the jobs. Saved Jobs can be erased with a full ODIO. Secure jobs and personal prints can be erased with a full or standard ODIO.</p> <p>Print Jobs are not stored on the SD card.</p>					

Hard Disk Descriptions					
Complete this table if the device has media storage capability					
Drive / Partition (System, Image):	Removable Y / N	Size:	User Modifiable: Y / N	Function:	Process to Clear:
System Disk	Yes	160GB	No with normal operation	Fonts, saved jobs, job accounting records, and temporary storage for spooling	Diagnostic Procedure
<p><b>Additional Information:</b>            This System disk contains fonts, and job files downloaded by the user to the device. During normal operation, job files are not stored on this disk. One exception is "Print From", "Saved Jobs" feature. Customer jobs saved on the machine's hard disk using this feature must be manually deleted by the customer. If Image Overwrite is installed and full disk overwrite is selected all saved jobs will be erased.</p> <p>User data and image data may be completely erased if optional Image Overwrite kit is installed and enabled. Using a three-pass algorithm which conforms to U.S. Department of Defense Directive 5200.28-M (DOD Directive 8500.1 supersedes 5200.28M).</p> <p>The partitions containing user data may be encrypted using a FIPS-140 compliant encryption algorithm.</p>					

USB Port(s)	
Complete an entry for each USB port	
USB port and location	Purpose
Rear Panel – 1 Target port	User PC direct connection for printing.
USB Host Connector on the printer controller board	Can be used to upgrade the firmware of the device. Cannot be used to transfer data from the printer to another machine.
<b>Additional Information:</b>	

## Feeder and Finisher Module Descriptions

The text below details the information regarding the volatile and non-volatile memory contained in the Phaser 6700 supported feeders. This document lists the available options. Depending on the configuration purchased, your system will contain on or more of these devices. **NOTE: None of these devices store any job data in electronic form.**

### Feeder Module Descriptions

#### Optional Input Tray Modules

The optional tray modules never contain job data or Personally Identifiable Information. They have no memory inside the device is used for configuration settings and normal operation.
