

# Mini Bulletin XR16E

## WorkCentre 5325/5330/5335

### SPAR Release 53.32.52

Bulletin Date: Feb 24, 2016

## Purpose

This Bulletin is intended ONLY for the specific security problems identified below. The problems identified has been rated a criticality level of **IMPORTANT**.

Includes fix for:

- SSLv3.0 Poodle Vulnerability (CVE-2014-3566). SSLv3 supports an older encryption method that is no longer considered secure, and is no longer viable for protecting sensitive data in transmission over networks. This could allow a Man-in-The-Middle (MiTM) attack where a person on the network can force a “downgrade” of the session between a client and server to use SSLv3 instead of a more secure protocol such as TLS.

Fixed by disabling SSL and using TLS only.

## Software Release Details
