Introduction

Xerox multifunction devices have the ability to scan documents to a server using the Microsoft Server Message Block (SMB) protocol. There are many versions of this protocol and the version used is negotiated between the server and the Xerox device. In general, this means the highest version that both client and server support will be used but this may not always be the case. It is possible to disable a lower version by configuration changes at the server.

This document describes currently supported SMB versions for scanning features. This document does not address SMB versions when used for device authentication.

Note: This information is valid for the latest available Software for each product. Xerox will update the tables below as changes are made to products. If you wish to have a specific SMB version supported by a Xerox device, please contact Xerox Customer Support.

*Please obtain the latest SPAR release of this product from Xerox.com to receive support for SMB v2.0 and/or SMB v3.0.
