Information Assurance Disclosure of Xerox® Easy Translator Service

Secure translations anytime, anywhere.

Information in any language is a strategic business asset, and its safety and availability affect practically all aspects of a business.
To ensure comprehensive protection of your information (personal and payments data, submitted documents and ready translations), all levels must be protected simultaneously. This is why the Xerox® Easy Translator Service approach offers in-depth defense no matter where your translation is.

The Leading Standards for Security

The cloud-based Xerox® Easy Translator Service is optimally flexible and reduces the time and cost of managing translation projects with a traditional agency or freelance translators. To ensure the safety of your projects on the cloud, we utilize the leading standards for security so you can submit your highly sensitive data without fear.

Information Assurance Disclosure

Best-in-class Managed and Dedicated Cloud Hosting

Xerox® Easy Translator Service is hosted on the Microsoft Azure Network. Microsoft's Azure data center operations feature comprehensive information security policies and processes using standardized industry control frameworks, including ISO 27001, SOC 1, and SOC 2. For a full description, please follow the link:

Feb2015.pdf

To ensure the maximum security of your corporate assets, Xerox® Easy Translator Service can be hosted on your organization's servers. For more information, contact us directly at contact@xeroxtranslates.com.

Secure Web Communications

All web communications between servers and browsers are encrypted using TLS – the industry's best data encryption technology. This makes an HTTP Secure (https) server connection possible, allowing information breaches to be prevented.

State-of-the-art ConnectKey® Technology for Secure MFP Translations

The Xerox® Easy Translator Service MFP application based on state-of-the-art Xerox® ConnectKey® technology lets users get translations instantly on the spot using typical scanning methods.

To protect your MFP translations from potential outside threats, ConnectKey® Technology features industry-leading security made possible by our groundbreaking partnerships with Intel Security and Cisco®. For a full description, click the following link:

The Leading Standard in the Card Payment Industry

There are around 10 payment methods for Xerox® Easy Translator Service. To protect your financial transactions we only use the most trusted security standard in the card payment industry: the Payment Card Industry Data Security Standard (PCI DSS). PCI DSS compliance requires adherence to strict data encryption methodologies and network and traffic monitoring services.

In addition, we also utilize the following anti-fraud and privacy protection methods:

- **Daily ScanAlert scans and a McAfee Secure** certification defend servers against attacks from known vulnerabilities
- **Managed risk services** ensure tight legal controls for Denied Party compliance checks

Complete Confidentiality with Machine Translation

We are often asked how our machine translation service is better than similar free services. One of the most important differences is security.

Free services usually save and reuse all submitted texts to improve the quality of future translations. It does not matter whether the translations are yours or belong to another user. Anyone who uses this free service can see information from previous orders – including yours – in their translation results. In fact, when using such a free service you make your information publicly available and forfeit its confidentiality.

If you order machine translation with Xerox® Easy Translator Service, you can be sure your information is never reused for other parties' translations. We guarantee that it will never be disclosed to any third parties. This means that with Xerox® Easy Translator Service you can confidently submit even highly sensitive content.

This applies to all your translations, whether they are completed in a web browser, your smartphone, or a Xerox® ConnectKey®-enabled MFP.

Safe Human Translation

Express, Professional, and Expert translation projects are performed by professionals from all over the world. Each of them have been thoroughly tested and signed a non-disclosure agreement. According to this agreement all our translators, editors and proofreaders are required to keep translation project information strictly confidential.
