1 Before Using the Security Features

This section describes the certified security features and items to be confirmed.

Preface

This manual describes the setup procedures related to security.
This manual is mainly intended for the manager and system administrator of the organization where the machine is installed.
This manual also describes useful information for general users about the operations related to security features.
For information on the other features available for the machine, refer to the following guidance.

- Xerox® VersaLink B405 Multifunction Printer User Guide: Version 2.0
- Xerox® VersaLink C405 Multifunction Printer User Guide: Version 2.0

NOTE:
- The hash values of the PDF files are described in the Security Target disclosed at the Xerox (https://www.xerox.com/information-security/common-criteria-certified/enus.html) and JISEC (http://www.ipa.go.jp/security/jisec/jisec_e/) website.
  Please check that the hash values of your manuals are correct.
- The Manual version might be changed when the manual content is updated.

The security features of the Xerox® VersaLink C405/B405 are supported by the following ROM version.

Controller ROM Ver. 1.0.31

NOTE:

The machine has obtained IT security certification for Common Criteria EAL2+ALC_FLR.2.
This certifies that the target of evaluation has been evaluated based on the certain evaluation criteria and methods, and that it conforms to the security assurance requirements.
Your ROM and guidance may not be the certified version because they may have been updated along with machine improvements.
For the latest information concerning your device, download the latest versions from http://www.support.xerox.com/support.
- Please check the state of the delivered machine’s packaging. If you could not confirm the packaging state at delivery and would like to know the details of the delivered state, please contact our sales representative or customer engineer.
If you have such inquiries as the following, please contact us (www.xerox.com/support):
- Inquiries about the machine’s functions
- All other inquiries.

You can check whether your model has the security functions by checking whether icons for the functions appear on the control panel or by checking Configuration Report.

You can identify the product codes for the models in the List of Product Codes in “Appendix”.

Security Features

The machine has the following security features:
- Flash Memory Encryption
- User Authentication
- System Administrator’s Security Management
- Customer Engineer Operation Restriction
- Security Audit Log
- Internal Network data protection
- Self Test
- Fax Flow Security

Settings for the Secure Operation

For the effective use of the security features, the System Administrator (Machine Administrator) must configure settings by referring to the following sections.
- Settings for the Secure Operation (Initial Settings Procedures Using Embedded Web Server)
- Settings for the Secure Operation (Initial Settings Procedures Using Control Panel)
- Regular Review by Audit Log
- Self Testing
- Authentication for the secure operation
- Operation using Control Panel
- Operation using Embedded Web Server
Below is the list of setting items and their values that need to be set.

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>EIP</td>
<td>disabled.</td>
</tr>
<tr>
<td>My Folder</td>

</tbody>
</table>
NOTE:

- The security will not be warranted if you do not correctly follow the above setting instructions.
- Once you have configured settings to deviate from this manual, please initialize the machine by executing **Reset to Factory Default** before you correct the settings according to the procedures.
- This manual has been prepared on the assumption that the Service Representative Restricted Operation function is set to **Enabled**. The security may not be warranted when maintenance operation is permitted to a customer engineer.
- The Fax Flow Security feature requires no special setting by the System Administrator.

**Service Representative Restricted Operation**

Specifies whether the Service Representative has full access to the security features of the machine, including the ability to change System Administrator settings.

For the VersaLink C405/B405, select **On** and then set **Maintenance Password** to restrict the Service Representative from entering the System Administration mode.

**NOTE:**

If the System Administrator’s password is lost when **Service Rep. Restricted Operation** is set to **On**, neither you nor the Xerox representative will be able to change any setting in the System Administration mode.
For Optimized Performance of the Security Features

The management organization needs to follow the instructions below:

- Assign appropriate personnel as machine and system administrators, provide training, and ensure proper oversight.
- Train users about the machine operation and precautions according to the policies of their organization and the product guidance.
- The machine needs to be placed in a secure or monitored area where the machine is protected from unmanaged physical access.
- If the machine is on the internal network that connects to external networks, configure the network properly to block any unauthorized external access.
- Users and administrators need to set password and Pre-Shared Key according to the following rules for the client PC and the machine’s setup.
  - Do not use an easily guessable password.
  - A password needs to contain both numeric and alphabetic characters.
- Administrators need to set the account policies on the remote authentication server as follows.
  - Set password policy to 9 or more characters.
  - Set account lockout policy to 5 times.
- Administrators need to remove the user accounts when users leave their organization.
- Users and administrators need to manage and operate the machine so that their user IDs and passwords may not be disclosed to another person.
- The users need to set the Secure Print for Job Type on printer driver.
- For secure operation, all of the remote trusted IT products that communicate with the machine must implement the communication protocol in accordance with industry standard practice with respect to RFC/other standard compliance (TLS, IPSec, S/MIME) and must work as advertised.

1) TLS
For the TLS client (Web browser) and the TLS server that communicate with the machine, select a data encryption suite from the following:
- TLS_RSA_WITH_AES_128_CBC_SHA
- TLS_RSA_WITH_AES_256_CBC_SHA
- TLS_RSA_WITH_AES_128_CBC_SHA256
- TLS_RSA_WITH_AES_256_CBC_SHA256

2) S/MIME
For the machine and E-mail clients, select an Encryption Method/Message Digest Algorithm from the following:
- 3Key Triple-DES/168bit, AES/128bit, AES/192bit, AES/256bit
- SHA1, SHA256

3) IPSec
For the IPSec host that communicates with the machine, select an Encryption Method/Message Digest Algorithm from the following:
- AES (128bit)/SHA1/SHA256/SHA384/SHA512
- 3Key Triple-DES (168bit)/SHA1/SHA256/SHA384/SHA512
NOTE:

- While you are using the **Embedded Web Server**, do not access other web sites, and do not use other applications.
- When you leave your computer while you are using **Embedded Web Server**, make sure to lock the screen in order to prevent unexpected operations by others.
- When you change **Login Method** or prior to disposing of the machine, please initialize the machine by executing **Reset to Factory Default** so that user data cannot be accessed by unexpected users who shouldn’t have the access right.
- For preventing SSL vulnerability, you should set the machine address in the proxy exclusion list of browser. By this setting, you can prevent man-in-the-middle attack because the machine and the remote browser communicate directly without proxy server.
- NTP server connection is outside the scope of evaluation.

**Confirm the Machine ROM Version and the System Clock**

Before making initial settings, the System Administrator needs to check the ROM version of the machine and the system clock of the machine.

**Login as System Administrator**

1. Select Log In on the control panel.
2. Select admin.
3. Enter the password from the keypad.
4. Select OK.

**Check the Machine ROM Version**

1. Select Device on the control panel.
2. Select About.

Identify the firmware version of the components of the machine on the screen.

**Print the Configuration Report**

1. Select Device on the control panel.
2. Select About.
3. Select Information Pages.

Identify the firmware versions of the components of the machine.

If the machine contains HDD option for VersaLink C405, Configuration Report shows “Hard Disk Total Size” in “Device Configuration” section.
If the machine contains SSD option for VersaLink B405, Configuration Report shows “SSD Total Size” in “Device Configuration” section.

Check the System Clock

   Check the time and the date of the system clock. If you need to change the time and the date, refer to the following procedures.
2. Select Date & Time twice.
3. Change the required setting.
4. Select OK twice.
5. Select <.
6. Press the <Home> button.
2 Initial Settings Procedures Using Embedded Web Server

This section describes the initial settings related to security features, and how to set them on the Embedded Web Server.

Preparations for Settings on the Embedded Web Server

Prepare a computer supporting the TCP/IP protocol to use the Embedded Web Server. Embedded Web Server supports the browsers that satisfy TLS conditions.

1. Open your Web browser, enter the TCP/IP address of the machine to the URL bar, and press the <Enter> key.
2. Select Log In on the Embedded Web Server.
3. Select admin.
4. Enter the password.
5. Select Log In.

Change the System Administrator’s Password

1. Select Permissions.
2. Select admin.
3. Select Change Password.
4. Enter the old password in Old Password.
5. Enter the new password in New Password.
6. Enter the new password in Retype New Password.
7. Select OK.

Set EIP

For the secure operation of the machine, follow the procedure below to set EIP to Disabled

1. Select Apps.
2. Select EIP Settings.
3. Disable all services.

Set My Folder

For the secure operation of the machine, follow the procedure below to set My Folder to Disabled
1. Select Apps.
2. Select My Folder.
3. Select Hide.

Set DropBox
For the secure operation of the machine, follow the procedure below to delete DropBox application.

1. Select Apps.
2. Select Print and Scan for Dropbox.
4. Select Delete.

Set GoogleDrive
For the secure operation of the machine, follow the procedure below to delete GoogleDrive application.

1. Select Apps.
2. Select Print and Scan for GoogleDrive.
4. Select Delete.

Set OneDrive
For the secure operation of the machine, follow the procedure below to delete OneDrive application.

1. Select Apps.
2. Select Print and Scan for OneDrive.
4. Select Delete.

Set Scan to Desktop
For the secure operation of the machine, follow the procedure below to set Scan to Desktop to Disabled.

1. Select Apps.
2. Select Scan to Desktop.
3. Select Hide.

Set USB
For the secure operation of the machine, follow the procedure below to set USB to Disabled.
1. Select Apps.
2. Select USB.
3. Select Hide Display on Device.
4. Select Hide Scan to and Print From.
5. Select Restart Later if prompted.

**Set App Gallery**
For the secure operation of the machine, follow the procedure below to delete App Gallery application.

1. Select Apps.
2. Select Xerox App Gallery.
4. Select Delete.

**Set Authentication**
Follow the procedure below to configure the authentication settings.

1. Select Permissions.
2. Select Login/Logout Settings.

Configure the Local Authentication or Network Authentication Settings in the following procedures.

To use Local Authentication
3. Select Local.
4. Select OK.
5. Select Change.
   The Machine automatically restarts.

To use Kerberos Network Authentication
7. Select Kerberos (Windows ADS).
8. Select Next.
9. Set Realm and Server Address.
10. Select OK.
11. Select Restart Now if prompted.

To use LDAP Network Authentication.
12. Select Network.
13. Select LDAP.
14. Select Next.
16. Set Server Information and Advanced Settings.
17. Select OK.
18. Select Restart Later if prompted.
19. Select Done.
20. Select Change.
   The machine automatically restarts.

Set Access Control

Follow the procedure below to configure the access control settings.

1. Select Permissions.
2. Select Edit for Guest Access.
3. Select Device User Role.
4. Select No Access for Control Panel Permissions.
5. Select Custom Permissions for Device Website Permissions.
7. Select Home.
8. Select Restrict.
9. Select OK.
10. Select Close.
11. Select OK.
12. Select Restart Later if prompted.
15. Select Custom Permissions for Printing Permissions.
16. Disable all services for Allowed Job Types.
17. Select OK.
18. On the Permission screen, select Roles.
20. Select Edit for Basic User.
21. Select Custom Permissions for Control Panel Permissions.
22. Select Setup.
23. Select Device.
24. Select Hide for View Information Pages (under About) and Support Page.
25. Select Hide for View General, Apps, and Connectivity.
26. Select Hide for View Network Information
27. Select OK.
28. Select Apply Change if prompted.
29. Select Jobs.
30. Select Hide for Delete Jobs.
31. Select Hide for View Secure Fax.
32. Select OK.
33. Select Close.
34. Select Personalization.
35. Select Hide for Customize Home Screen.
36. Select OK.
37. Select Close.

38. Select Custom Permissions for Device Website Permissions.
39. Select Setup.
40. Select Jobs.
41. Select Hide for Delete Jobs.
42. Select Close.
43. Select OK.

44. On the Permission screen, select Roles.
45. Select Printing User Roles.
46. Select Edit for Basic Printing User.
47. Select Custom Permissions.
48. Disable Normal Print, Personal, Sample Set, Public Saved for Allowed Job Types.
49. Select OK.

Set Maximum Login Attempts
Follow the procedure below to specify maximum login attempts.

1. Select Permissions.
2. Select Login/Logout Settings.
3. Select Edit for Advanced Settings.
4. Select Limit Login Attempts of System Administrator.
5. Enable Limit Login Attempts of System Administrator.
6. Enter 5 in Failed Login Attempt Limit.
7. Select OK twice.

Set User Password Minimum Length
Follow the procedure below to specify the minimum number of digits allowed for a password.
This feature is only applicable to Local Authentication mode.

1. Select Permissions.
2. Select Password Rules.
3. Enter 9 in Minimum Length.
4. Select OK.
5. Select Restart Later if prompted.

Set TLS
The Embedded Web Server requires TLS communication between a network connected computer and the machine.

1. Select System.
4. Enable HTTP - SSL/TLS Communication.
5. Enable LDAP - SSL/TLS Communication.
6. Select OK.
7. Select Restart Now if prompted.

**NOTE:**
- For secure operation, you should enable Verify Remote Server Certificate, and import the CA certificate according to the same procedure as “Import Machine Certificates”.

### Import Machine Certificates

Import the Certificates for SSL, IPSec, S/MIME.

1. Select System.
4. Select Import.
5. Select Select.
6. Select a certificate.
7. Enter Password, and enter Retype Password if necessary.
8. Select Import.

### Set Certificate Validation

Follow the procedure below to configure the Certificate Path Validation settings.

1. Select System.
4. Select On.
5. Select OK.
6. Select Restart Later if prompted.

### Set Google Cloud Print

For the secure operation of the machine, follow the procedure below to set Google Cloud Print to Disabled.

1. Select Connectivity.
2. Select Google Cloud Print.
3. Disable Google Cloud Print
4. Select OK.
5. Select Restart Later if prompted.
Set Bonjour
For the secure operation of the machine, follow the procedure below to set Bonjour to Disabled.

1. Select Connectivity.
2. Select Bonjour.
3. Disable Port.
4. Select OK.
5. Select Restart Later if prompted.

Set IPP
Follow the procedure below to configure the IPP settings.

1. Select Connectivity.
2. Select IPP.
3. Enable Port
4. Select OK.
5. Select Restart Later if prompted.

Set SOAP
For the secure operation of the machine, follow the procedure below to set SOAP to Disabled.

1. Select Connectivity.
2. Select SOAP.
3. Disable Port.
4. Select OK.
5. Select Restart Later if prompted.

Set SNMP
For the secure operation of the machine, follow the procedure below to set SNMP to Disabled.

1. Select Connectivity.
2. Select SNMP.
3. Disable Port.
4. Select OK.
5. Select Restart Later if prompted.

Set SMB
For the secure operation of the machine, follow the procedure below to set SMB to Disabled.

1. Select Connectivity.
2. Select SMB.
3. Disable Port.
4. Select OK.
5. Select **Restart Now** if prompted.

**Set WSD Scan**

For the secure operation of the machine, follow the procedure below to set *WSD Scan* to **Disabled**.

1. Select **Connectivity**.
2. Select **WSD (Web Services on Devices)**.
3. Disable **WSD Scan**.
4. Select **OK**.
5. Select **Restart Now** if prompted.

**Set CSRF**

Follow the procedure below to configure the CSRF settings.

1. Select **Connectivity**.
2. Select **HTTP**.
3. Enable **CSRF Protection**.
4. Select **OK**.
5. Select **Restart Later** if prompted.

**Set LDAP Server**

Configure the LDAP server settings for directory service.

1. Select **Connectivity**.
2. Select **LDAP**.
3. Select **LDAP Servers / Directory Services**.
4. Set Server Information and Advanced Settings.
5. Select **OK**.
6. Select **Restart Later** if prompted.

**Set User Role**

Configure the user role settings for network authentication mode.

1. Select **Permission**.
2. Select **Roles**.
3. Select **Setup LDAP Permissions Groups**.
4. Select **LDAP**
5. Select **OK**.
6. Select **Restart Now** if prompted.
7. On the **Permission** screen, select **Roles**.
8. Select **Edit LDAP Groups**.
9. Select +.
10. Enter an administrator group.
11. Select the search mark.
12. Select a searched group.
13. Select Next.
15. Select Next.
16. Select +.
17. Enter a general user group.
18. Select the search mark.
19. Select a searched group.
20. Select Next.
21. Select Basic User Role.
22. Select Next.
23. Select Basic Printing User Role.
24. Select Next.

Set S/MIME

Enable the S/MIME communication to use the e-mail encryption and digital signature features. Before making the S/MIME setting, you need to import an S/MIME certificate according to the same procedure as "Import Machine Certificates". To use E-mail with this machine, the E-mail function needs to be enabled and configured.

1. Select Connectivity.
2. Select S/MIME.
3. Enable S/MIME.
4. Select OK.
5. Select Restart Now if prompted.

Set Email

Follow the procedure below to configure the E-mail settings.

1. Select Apps.
2. Select Email.
3. Select Setup.
4. Set Email Address for Device Email.
5. Select Server Address for SMTP Server.
6. Set Server Address.
7. Select OK.
8. Set a port number for Outgoing SMTP Port Number.
9. Select OK.
10. Select Restart Later if prompted.
11. Select Encryption for Scan To Apps General Settings.
12. Enable Encrypt Email.
13. Select OK.
14. Select Restart Later if prompted.
Set Direct Fax
For the secure operation of the machine, follow the procedure below to set Direct Fax to Disabled.

1. Select Apps.
2. Select Fax.
3. Select Direct Fax.
4. Select Not Allowed.
5. Select OK.
6. Select Restart Later if prompted.

Set Secure Fax Receive
Follow the procedure below to configure the Secure Fax Receive settings.

1. Select Apps.
2. Select Fax.
4. Enable this service
5. Set a passcode.
6. Select OK.
7. Select Restart Now if prompted.

Set Service Representative Restricted Operation
Follow the procedure below to restrict the operation of service representatives.

1. Select System.
4. Enable this service.
5. Enter a password of 9 or more characters in Maintenance Password and Retype Maintenance Password.
6. Select OK.
7. Select Enable twice.
8. Select Restart Later if prompted.

Set Self Test
Follow the procedure below to configure the Self Test settings.

1. Select System.
3. Select Firmware Verification.
4. Select On.
5. Select OK.
6. Select Restart Later if prompted.
Set Auto Clear
Follow the procedure below to configure the Auto Clear settings.

1. Select System.
2. Select Timeouts.
3. Enter a time for Reset Device Control Panel.
4. Enter a time for Reset Device Website.
5. Select OK.
6. Select Restart Later if prompted.

Set Store Print
Follow the procedure below to configure the Store Print settings.

1. Select System.
2. Select Defaults and Policies.
3. Select Allowed Print Job Types for Printer Settings.
5. Select OK.
6. Select Restart Later if prompted.
7. Select Close.

Set Audit Log
Follow the procedure below to configure the Audit Logs settings.

1. Select System.
2. Select Logs.
3. Select Audit Log.
4. Enable this service.
5. Select OK.
6. Select Restart Later if prompted.

Set Software Download
Follow the procedure below to configure the Software Download settings.

1. Select System.
2. Select Software Update.
3. Select Disable.
4. Select Disable.
5. Select Restart Now if prompted.
Set IPSec

Before setting Digital Signature for IKE Authentication Method, you need to import an IPSec certificate according to the same procedure as "Import Machine Certificates".

1. Select Connectivity.
2. Select IPSec.
3. Enable IPSec.
4. Select Preshared Key or Digital Signature for IKE Authentication Method.
5. When you select Preshared Key, enter a preshared key of 9 or more characters in Preshared Key and Retype Preshared Key.
   When you select Digital Signature, select the certificate name in Device Certificate.
6. Enter the IP Address in Specify Destination IPv4 Address.
7. Enter the IP Address in Specify Destination IPv6 Address.
8. Select Enabled or Disabled for Communicate with Non-IPSec Device.
9. Select OK.
10. Select Restart Now if prompted.
3 Initial Settings Procedures Using Control Panel

This section describes the initial settings related to security features, and how to set them on the machine’s control panel.

Login as System Administrator
Before configuring settings, a user must be authenticated with an administrator’s ID and a password.

1. Select Log In on the control panel.
2. Select admin.
3. Enter the password from the keypad.
4. Select OK.

Set Fax Forwarding
For the secure operation of the machine, follow the procedure below to set Fax Forwarding to Disabled.

2. Select Fax.
3. Select Fax Forwarding.
4. Select Off.
5. Select OK.
4 Regular Review by Audit Log

This section describes the importing method of the Audit Log feature using the System Administrator client via Embedded Web Server.

The Audit Log is regularly reviewed by the Security Administrator, often with the aid of third party analyzing tools. The audit log helps to assess attempted security breaches, identify actual breaches, and prevent future breaches.

The important events of the machine such as device failure, configuration change, and user operation are traced and recorded based on when and who operated what function.

Auditable events are stored with time stamps into the internal storage device. Up to 15,000 events can be stored. When the number of recorded events exceeds 15,000, the oldest audit log file is overwritten and a new audit event is stored.

There is no deletion function.

Import the Audit Log File

The following describes methods for importing the Audit Log. The audit logs are only available to System Administrators and can be downloaded via Embedded Web Server for viewing and analyzing them.

The logged data cannot be viewed from the local UI.

In addition, TLS communication must be enabled in order to access the logged data.

1. Open your Web browser, enter the TCP/IP address of the machine in the Address or Location field, and press the <Enter> key.
2. Select Log In on the Internet Service.
3. Select admin.
4. Enter the password from keyboard.
5. Select Log In.
7. Select Logs.
8. Select Audit Log.
9. Select Export.
e.g.: The following audit log is recorded, when someone tried to login under ID (User1), and the login failed due to an invalid password.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log ID</td>
<td>1</td>
</tr>
<tr>
<td>Date</td>
<td>01/01/2018</td>
</tr>
<tr>
<td>Time</td>
<td>10:00:00</td>
</tr>
<tr>
<td>Logged Events</td>
<td>Login/Logout</td>
</tr>
<tr>
<td>User Name</td>
<td>User1</td>
</tr>
<tr>
<td>Description</td>
<td>Login</td>
</tr>
<tr>
<td>Status</td>
<td>Failed (Invalid Password)</td>
</tr>
<tr>
<td>Optionally Logged Items</td>
<td>-</td>
</tr>
</tbody>
</table>
5 Self Testing

This section describes the Power on Self Test function. The machine can execute a Self Test function to verify the integrity of executable code and setting data. The machine verifies the area of NVRAM and SEEPROM including setting data at initiation, and displays an error on the control panel at error occurrence. However, an error is not detected for the data on audit logs and time and date as these are not included in the target of verification. Also, when Self Test function is set at initiation, the machine calculates the checksum of Controller ROM to confirm if it matches the specified value, and displays an error on the control panel at error occurrence.
6 Authentication for the secure operation

The machine has a unique Authentication feature that restricts the authority to use functions. This section contains information for System Administrators and general users on the features used to change the settings and on the setting procedures.

Users Controlled by Authentication

The following explains the user types that are controlled by the Authentication feature. Users are classified into the following four types. The Authentication feature restricts operations according to the user type.

Machine Administrator

The machine administrator uses a special user ID. Only the machine administrator is able to change the Machine Administrator Password. The machine administrator is a user who can enter the System Administration mode and change the machine settings that are related to security features and services that are restricted. To enter the system administration mode, enter the Machine Administrator ID into the user ID entry field on the authentication screen.

Authenticated Users (with System Administrator Privileges)

Users to whom the system administrator privileges are granted. To use a restricted service, this type of users must enter their user IDs on the authentication screen. This type of users have the same privileges as the machine administrator in operating the machine, however, they cannot change the Machine Administrator Password.

Authenticated Users (with no System Administrator Privileges)

Users who are registered on the machine or the remote server, and to whom system administrator privileges are not granted. To use a restricted service, this type of users must enter their user IDs on the authentication screen.

Unauthenticated Users (Guest Users)

These are users who are not registered with the machine. Unauthenticated Users cannot use services that are restricted.

Roles

Role is used to control the permissions on printer features and access to some settings. You can create and assign roles to users to give them appropriate permissions.
The following shows the types of roles.

**System Administrator**
System Administrator is assigned to the system administrator account by default. The System Administrator role cannot be customized.

**Basic User**
Basic User is automatically assigned to a user with no device user role assigned, and Basic Printing User is automatically assigned to a user with no printing user role assigned. Features other than setup and configuration are allowed by default. You can customize the basic user permissions.

**Login Method**

**Local Authentication (Login to Local Accounts)**
Local authentication uses the user information that is registered on the machine to manage authentication.

**Remote Authentication (Login to Network Accounts)**
Remote authentication uses a network authentication server (LDAP or Kerberos Server) and authenticates users based on the user information managed on the server. User information cannot be registered on the machine.

**Functions Controlled by Access Method**
The following explains the functions that are restricted by the Authentication feature. The restriction depends on which access method is used:

**Local Access (Control Panel Permissions)**
Remote Access (Device Website Permissions)

**Local Access (Control Panel Permissions)**
Direct operation of the machine from the control panel is called Local Access. The functions restricted by Local Access are as follows.

**Everything Except Setup**
Users can access everything except setup and configuration functions.
Copy Only

Users can use Copy Apps only. No access to Scanning Apps, Printing Apps, status or set up functions.

Access All

Users can access all functions.

Custom Permissions

Users can choose the services to be customized.
- Address Book
- AirPrint (Scan)
- Copy
- Device
- Email
- Fax
- ID Card Copy
- Jobs
- My Folder
- Remote Scanning
- Scan To
- Scan to Desktop
- USB

Remote Access (Device Website Permissions)

Operation of the machine through a network using Embedded Web Server is called Remote Access. The functions restricted by Remote Access are as follows.

Everything Except Setup

Users can access everything except: Apps, Connectivity, Permissions, and System

Home Only

Users only have access to the Home page.

Custom Permissions

Users can choose the services to be customized: Address Book or Jobs
Authentication for Secure Fax Receive

The following explains the restricted operations on Secure Fax Receive when the Authentication feature is enabled.

NOTE:

- Authenticated Users who are given the System Administrator privileges can access to Secure Fax Receive jobs according to the settings described previously.
- The machine has a single Secure Fax Receive folder to hold received fax jobs.

Maximum Login Attempts by System Administrator

This feature protects the settings from being changed by someone impersonating your system administrator. If authentication for a system administrator’s ID fails more than specified times continuously, access is denied. You can specify a login attempt count from 1 to 10.

NOTE:

- The failure count is reset when the machine is restarted.
- To cancel the access rejection state, restart the machine by switching off and on the power.
7 Operation Using Control Panel

This section describes the operation using control panel to use security features for System Administrators and authenticated users.

User Authentication

This section describes the operation of user authentication.
Before using, all services and configuring settings, a user must be authenticated with an ID and a password.

1. Select a UserID on the touch screen.
2. Enter the password.
3. Select OK.
All features on the control panel become available.

NOTE:
- When using Local Authentication, only the System Administrator’s ID is pre-registered on the machine. Other user IDs are not registered. For details on how to register User IDs, refer to the “Operation Using Embedded Web Server”.
- When using Network Authentication, the user information registered on a remote authentication server is used. The System Administrator’s ID on the machine is not registered on a remote authentication server.

Job Deletion by Authenticated Users

This feature allows only authenticated users to delete the active jobs.
Cancels the current or pending job. Select a table row or status indicator that you want to delete. Then select the Delete button.

Deleting the Copy, Scan, Fax Send, Print job
1. Press the <home> button.
2. Select Jobs.
3. Select the job to be deleted.
4. Select Delete.
Deleting the receiving fax jobs, the spooling print jobs

1. Press the <home> button.
2. Select Jobs.
3. Select the job to be deleted.
4. Select Delete.

**NOTE:**
Only System Administrators are allowed this operation.

Print from Secure Fax Receive folder

This section describes the Secure Fax Receive features that allow you to check or print files in the Secure Fax Receive folder that is displayed on the Jobs screen.

1. Press the <home> button.
2. Select Jobs.
4. Select Secure Fax Receive folder.
5. Select a job to be printed or Print All.

**NOTE:**
- The machine has a single Secure Fax Receive folder to hold received fax jobs.
- Only System Administrators can print a secure fax receive jobs according to the settings described previously.
- When there is at least one Secure Fax, the Secure Fax folder appears at the top of the Secure Jobs list.

Print and delete Secure Print jobs

The Secure Print feature temporarily stores files per user ID until a user logs in and manually prints them from the machine’s control panel.

This feature only displays files of a logged-in user and thus provides security and privacy of files stored in the machine.

1. Press the <home> button.
2. Select Jobs.
4. Select a job to be printed or Delete All or Print All.
8 Operation Using Embedded Web Server

This section describes the operation using Embedded Web Server to use security features for System Administrators and authenticated users. The Embedded Web Server program uses the embedded Web User Interface which enables communication between a networked computer and the machine via HTTP. Embedded Web Server can be used to create/edit User accounts, to check each job and the machine status, or to change the network settings.

**NOTE:**
For information of the Embedded Web Server feature, refer to the User Guide. Some of the Embedded Web Server features have restricted access. Contact a System Administrator for further assistance.

**Accessing Embedded Web Server**

Follow the steps below to access Embedded Web Server. On a client computer on the network, launch an internet browser. In the URL field, enter “http://” followed by the IP address or the Internet address of the machine. Then, press the <Enter> key on the keyboard.

For example, if the Internet address (URL) is vvv.xxx.yyy.zzz, enter it in the URL field as shown below:

- `http://vvv.xxx.yyy.zzz`

The IP address can be entered in either IPv4 or IPv6 format. Enclose the IPv6 address in square brackets.

- IPv4: `http://xx.xxx.xx.xxx`

If a port number is set, append it to the IP address or the Internet address as follows. In the following example, the port number is 80.

- URL: `http://vvv.xxx.yyy.zzz:80`

The home page of Embedded Web Server is displayed.
NOTE:
When the Authentication feature is enabled, you are required to enter your user ID and your password. You need to enter your user ID and your password to access Embedded Web Server to configure and use the security functions of the machine.
When your access to Embedded Web Server is encrypted, enter https:// followed by the IP address or the Internet address, instead of “http://”.

User Authentication

This section describes the operation of user authentication.
Before using, all services and configuring settings, a user must be authenticated with an ID and a password.

Log in to the Embedded Web Server.
1. Select Log In.
2. Select the user account from the list, or enter the user name.
3. Enter the password.
4. Select Log In.

NOTE:
- Enter the user name for the Network authentication. For the Local authentication, the user identification varies depending on the settings.
- When the Network authentication system is Kerberos, entering the realm or domain is required. For Kerberos, enter the user name and realm in the UPN format (<username>@<realm>).

All features on the Embedded Web Server become available.

Create User Accounts

This feature allows you to register user account information, such as User IDs and passwords. This feature is only applicable to Local Authentication mode.

1. Select Permissions.
2. Select Add for User Accounts.
3. Enter a user ID for User Name.
4. Enter a password for Password.
5. Enter the same password for Retype Password.
6. Select Add.

User ID (User Name)

Allows you to enter a User ID using Web Browser. You can enter up to 64 alphanumeric characters as a User ID.
Password
Allows you to enter a password using Web Browser. You can enter up to 64 alphanumeric characters.

E-mail Address
Allows you to enter the e-mail address. The specified address that is displayed on the Email “From” Address field is set as the sender’s address of the machine. You can enter up to 128 characters.

User Role
Allows you to select the privileges that are given to the user. Select from Basic User or System Administrator.

Change User Password by Authenticated Users
This feature allows Authenticated Users (users who are authenticated by the procedure described in "User Authentication") to change the registered password.
This feature is only applicable to Local Authentication mode.

1. Select the user icon on upper right corner on the Embedded Web Server.
2. Select My Profile.
3. Select Change Password.
4. Enter the old password in Old Password.
5. Enter the new password in New Password.
6. Enter the new password in Retype New Password.
7. Select OK.

Job Deletion by Authenticated Users
This feature allows only authenticated users to delete the active jobs.
Cancels the current or pending job. Select a table row or status indicator that you want to delete. Then select the Delete button.

Deleting the Copy, Scan, Fax Send, Print job
1. Log in to the Embedded Web Server.
2. Select Jobs.
3. Select the job to be deleted.
4. Select Delete.

Deleting the receiving Fax jobs, the spooling Print job
1. Log in to the Embedded Web Server.
2. Select Jobs.
3. Select the job to be deleted.
4. Select **Delete**.

**NOTE:**

Only System Administrators are allowed this operation.
9 Problem Solving

This section describes solutions to problems that you may come across while using the machine and Embedded Web Server. The machine has certain built-in diagnostic capabilities to help you identify problems and faults, and displays error messages on the control panel and web browser, whenever problems or conflicts occur.

Fault Clearance Procedure

If a fault or a problem occurs, there are several ways in which you can identify the type of the fault. Once a fault or a problem is identified, specify the probable cause, and then apply the appropriate solution.

- If a fault occurs, first refer to the screen messages to clear the fault according to the specified order.
- Also refer to the fault codes displayed on the touch screen in the Machine Status mode.
  Refer to the Fault Codes table below for an explanation of some fault codes and corresponding corrective actions.
- When you have problems in fixing the fault, contact a System Administrator for assistance.
- In some cases, the machine may need to be turned off and then on.

**NOTE:**

- You should call for service representative if the problem persists or a message indicates so.
- Even when the power of the machine fails, all the queued jobs will be saved because the machine is equipped with the storage device. The machine will resume processing the queued jobs when the power of the machine is turned back on.
Fault Codes

This section explains error codes.

If a printing job ends abnormally due to an error, or a malfunction occurs in the machine, an error message code (***-***) is displayed. Refer to error codes in the following table to rectify problems.

**NOTE:**
If an error code is displayed, any print data remaining on the machine and information stored in the machine’s memory are not warranted.
If an error code that is not listed in the following table is displayed, or if an error persists after you follow the listed solution, contact our Customer Support Center. The contact number is printed on the label or the card attached on the machine.

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Cause and Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>016-210</td>
<td>Cause: An error occurred in the software. Remedy: Switch off the machine power, make sure that the touch screen is blank, and then switch on the machine power. If the error still is not resolved, contact our Customer Support Center.</td>
</tr>
<tr>
<td>016-211</td>
<td>Cause: The authentication connection timed out. Remedy: Confirm the network connection and switch setting of the authentication device physically connected to the machine via a network, and check whether it is connected to the machine correctly.</td>
</tr>
<tr>
<td>016-212</td>
<td>Cause: The root certificate did not match. Remedy: Confirm the authentication server and store the root certificate of the server certificate of the authentication server into the machine. If you cannot acquire the root certificate of the server certificate, set Server Certificate Verification of IEEE 802.1x Settings to Disabled on the touch screen.</td>

<tr>
<td>027-709</td>
<td>The S/MIME certificate associated with the machine’s email address has been discarded.</td>
<td>Import a new S/MIME certificate to the machine.</td>
</tr>
<tr>
<td>027-710</td>
<td>No S/MIME certificate is attached to the received e-mail.</td>
<td>Ask the sender to send the e-mail with an S/MIME certificate.</td>
</tr>
<tr>
<td>027-711</td>
<td>No S/MIME certificate was obtained from the received e-mail.</td>
<td>Import the sender’s S/MIME certificate to the machine, or attach an S/MIME certificate to S/MIME signature mail sent from the sender.</td>
</tr>
<tr>
<td>027-712</td>
<td>The received S/MIME certificate has expired, or is an unreliable certificate.</td>
<td>Ask the sender to send the e-mail with a valid S/MIME certificate.</td>
</tr>
<tr>
<td>027-713</td>
<td>The received e-mail has been discarded because it might be altered on its transmission route.</td>
<td>Tell the sender about it, and ask to send the e-mail again.</td>
</tr>
<tr>
<td>027-714</td>
<td>The received e-mail has been discarded because the address in its From field was not the same as the mail address in the S/MIME signature mail.</td>
<td>Tell the sender that the mail addresses are not identical, and ask to send the e-mail again.</td>
</tr>
<tr>
<td>027-715</td>
<td>The received S/MIME certificate has not been registered on the machine, or has not been set to use on the machine.</td>
<td>Import the sender’s S/MIME certificate to the machine, or change settings to use the S/MIME certificate on the machine when the S/MIME certificate has already been registered.</td>
</tr>
<tr>
<td>027-716</td>
<td>The received S/MIME certificate has been discarded because the certificate was unreliable.</td>
<td>Ask the sender to send the e-mail with a reliable S/MIME certificate.</td>
</tr>
<tr>
<td>027-717</td>
<td>Unable to obtain SMTP server address for e-mail transmissions from the DNS server.</td>
<td>Check whether the DNS server is set correctly.</td>
</tr>
